NEW QUESTION: 1

You are a transport administrator for an AS ABAP-based SAP system landscape. In the import queue of a single SAP system, you select multiple transport requests to be imported together. What happens when these transport requests are imported?

There are 2 correct answers to this question.

- A.** If an object is included in more than one transport request, it is first stored in the shadow repository. You can then activate/generate selected versions from the shadow repository later.
- B.** All objects in all the selected transport requests are merged together
- C.** If an object is included in more than one transport request, you can specify which object version will be activated/generated using unconditional (import) modes.
- D.** If an object is included in more than one transport request, only the version in the last transport request is activated/generated (according to the sequence in the import queue).
- E.** The objects in the first transport request are imported and activated/generated first, then the objects in the second transport request, and so on.
