The money offer is the best evidence on the remarkable content of Siamprogroup, Our goal is to aid your preparation of the ISO-27701-CLA exam, Each version of ISO-27701-CLA training prep boosts different characteristics and different using methods.

NEW QUESTION: 1

Which of the following answers is the BEST example of Risk Transference?

- A. Results of Cost Benefit Analysis
- B. Acceptance
- C. Insurance
- D. Not hosting the services at all

Answer: C

Explanation:

When we operate an organizational information system we are accepting a tolerable level of risk to allow the business functions to operate.

There may be risks you are not qualified to accept or risks you would be better off having undertaken by an outside entity. A classic example is having your popular web server hosted by a web hosting agency which completely relieves you of the risks associated with that.

Another example is insurance where you offload the risk to an insurance agency and pay them to accept the risk.

When we transfer risk we are giving the risk to someone else to accept and it could be for a number of reasons. Expense primarily but it could also be performance, offers of better service elsewhere, legal reasons and other reasons.

The following answers are incorrect:

-Results of Cost Benefit Analysis: This might be involved in the process of Risk Mitigation but it isn't part of Risk Transference. Sorry, wrong answer.

-Acceptance: This isn't correct because accepting the risk is the opposite of transferring the risk to someone else.

-Not hosting the services at all: Sorry, this defines Risk Avoidance.

The following reference(s) was used to create this question:
2013. Official Security+ Curriculum.

NEW QUESTION: 2

Company policies require that all network infrastructure devices send system level information to a centralized server. Which of the following should be implemented to ensure the network administrator can review device error information from one central location?

- A. Wi-Fi analyzer
- B. SYSLOG server
- C. TACACS+ server
- D. Single sign-on

Answer: B

Explanation:

Explanation/Reference:

Explanation:

Syslog is a protocol designed to send log entries generated by a device or process called a facility across an IP network to a message collector, called a syslog server. A syslog message consists of an error code and the severity of the error. A syslog server would enable the network administrator to view device error information from a central location.

NEW QUESTION: 3

NIOSH created which of the following programs to assist in responding to employer, as well as employee, concerns about workplace hazards?

- A. MSD
- B. VPP

C. MSH

D. HHE

Answer: D

Explanation:

Explanation: NIOSH created the HHE, or Health Hazard Evaluation, to assist in responding to employer, as well as employee, concerns about workplace hazards. A VPP is a Voluntary Protection Program in which employers may voluntarily choose to participate. (The standards for safety are significantly stricter.) MSH refers to Mine Safety and Health and usually applies to the legislation that passed in 1977. MSD refers to musculoskeletal disorders that result from poor ergonomics in the workplace.

NEW QUESTION: 4

You have a Microsoft Office 365 subscription. Microsoft Lync Online is enabled for all users. You need to identify which tools must be used to perform the following actions: View the Microsoft Lync client tracing logs. Verify the DNS records for the Lync Online mobile clients. Test the connection quality to the Lync Online data center. Collect the client system configurations and the application configurations. Which tools should you identify? To answer, drag the appropriate tools to the correct actions in the answer area. Each tool may be used once, more than once, or not at all. Additionally, you may need to drag the split bar between panes or scroll to view content. Select and Place:

Answer:

Explanation:

Explanation:

Box 1: Snooper utility Box 2: Microsoft Office Communications Server Remote Connectivity Analyzer Box 3: Office 365 Lync Online Transport Reliability IP Probe (TRIPP) tool Box 4: Microsoft Online Service Diagnostics and Logging (MOSDAL) Support Toolkit

Lync Online - Transport Reliability IP Probe (TRIPP Tool) This reliability tool tests your Internet connection to a Microsoft Lync Online Service data center and measures the response times, bandwidth, allowed ports, route taken, and overall connection quality with respect to Real Time Media. The results can help you evaluate your network configuration for potential use with the Microsoft Lync Online Service. This tool does not engage any of the offerings from Microsoft Lync Online Service. Microsoft Office Communications Server Remote Connectivity Analyzer The Office Communications Server Remote Connectivity Analyzer is a great tool for performing testing, troubleshooting, and diagnostics on Communications Server 2007 and Communications Server 2007 R2 deployments, and should server as your initial stop when attempting to troubleshoot a

Communications Server Edge Server connectivity issue. The Office Communications Server Remote Connectivity Analyzer is a web site that Communications Server administrators can use to validate and diagnose end-to-end Communications Server scenarios. The site simulates multiple Office Communications Server client access scenarios from outside the customer's infrastructure and reports whether the test was successful. If the test fails, the tool informs you exactly where in the process the test failed, as well as provides troubleshooting tips about resolving the issue.

The Microsoft Online Services Diagnostics and Logging (MOSDAL) Support Toolkit performs network diagnostics and collects system configuration, network configuration, and logging information for applications that are used to connect to Microsoft Business Productivity Online Standard Suite (BPOSS) or to Microsoft Office 365. The logs and diagnostic information that the tool generates provide data that helps technical support professionals troubleshoot configuration, network, installation, and other service-related issues. The MOSDAL Support Toolkit collects log files, registry keys, and configuration settings that would otherwise require time-consuming and labor-intensive collection by using separate tools.
