NEW QUESTION: 1

You are the project manager for your organization. You and the project team are developing the project schedule for your current project. In addition to the enterprise environment factors and the organizational process assets, you will need seven other inputs to this process. Which one of the following is NOT an input to the Develop Schedule process?

- A. Schedule data
- B. Project scope statement
- C. Resource calendars
- D. Activity list

Answer: A

Explanation:

Explanation/Reference:

Explanation:

Schedule data is an output of the Develop Schedule process. The nine inputs to the Develop Schedule process are: activity list, activity attributes, project schedule network diagrams, activity resource requirements, resource calendars, activity duration estimates, project scope statement, enterprise environmental factors, and organizational process assets.

Incorrect Answers:

A, C, D: These are the inputs to the Develop Schedule process.

NEW QUESTION: 2

Prior to installing a new driver update, a technician wants to create a restore point on a Windows 7 desktop. Which of the following interfaces will display the option to create a restore point?

- A. The Backup and Restore option
- B. The Advanced tab under System Properties
- C. The Windows Update option
- D. The System Protection tab

Answer: D

NEW QUESTION: 3

You have a computer named Computer1 that runs Windows 7. You have a server named

Server1 that runs Windows Server 2008.

Computer1 and Server1 have IPv4 and IPv6 installed.

You need to identify whether you can connect to Server1 by using IPv6.

What should you do?

- A. Open \\server1 from the Run dialog box.
- B. Run Ping Server1 -6.
- C. Run Ping Server1- n 6.
- D. Run Net view \\Server1.

Answer: B

Explanation:

Ping The Ping tool is still widely used, although more firewalls block Internet Control Message Protocol (ICMP) echo requests than used to be the case. However, even if you cannot get past a firewall on your organization's network, Ping is still useful. You can check that the IPv4 protocol is working on a computer by entering ping 127.0.0.1. You can then ping the IPv4 address of the computer. You can find out what this is by using the Ipconfig tool. If your computer has more than one interface combined in a network bridge, you can ping the Ipv4 address of the network bridge. When you have established that you can ping your computer using an Ipv4 address, you can test that DNS is working internally on your network (assuming you are connected to a DNS server, a WAP, or have ICS configured on your network) by pinging your computer name-for example, entering ping canberra. Note that if DNS is not implemented on your system, ping canberra still works because the IPv6 link-local address resolves automatically. -6 Force using IPv6.

NEW QUESTION: 4

DRAG DROP

You are using Microsoft Visual Studio to develop an App Service Web App named

WebApp.

The app must collect the statistics and details on the

application dependencies.

You need to set up, configure, and validate monitoring using Application Insights.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer :

Explanation:

Explanation:
