NEW QUESTION: 1

You are importing a Business Process setup into a Shell template. You receive an error message. Identify two reasons

that might have led to this transaction failure (Choose two.)

A. The Business Process setup that you are importing is not active.

B. The security settings in the Company Workspace prohibit import/copy functions.

C. The Shells are not of the same type.

D. You cannot import the Business Process into a Shell.

Answer: B,C

NEW QUESTION: 2

How many VRFs are present in Cisco Nexus OS by default?

A. 0

B. 1

C. 2

D. 3

Answer: B

Explanation:

Management VRF and Default VRF

Each router has a management VRF and a default VRF:

Management VRF

The management VRF is for management purposes only.

Only the mgmt 0 interface can be in the management VRF.

The mgmt 0 interface cannot be assigned to another VRF.

The mgmt 0 interface is shared among multiple VDCs.

No routing protocols can run in the management VRF (static only).

Default VRF

All Layer 3 interfaces exist in the default VRF until they are assigned to another VRF.

Routing protocols run in the default VRF context unless another VRF context is specified.

The default VRF uses the default routing context for all show commands.

The default VRF is similar to the global routing table concept in Cisco IOS.
