NEW QUESTION: 1

A Bank would like to deploy ClearPass Guest with web login authentication so that their customers can self-register on the network to get network access when they have meetings with Bank Employees. However, they're concerned about security.

Which of the following is true? (Choose 3)

- A.** During web login authentication, if HTTPS is used for the web login page, guest credentials will be encrypted.
- B.** If HTTPS is used for the web login page, after authentication is completed guest Internet traffic will all be encrypted as well.
- C.** If HTTPS is used for the web login page, after authentication is completed some guest Internet traffic may be unencrypted.
- D.** HTTPS should never be used for Web Login Page authentication.
- E.** After authentication, an IPSEC VPN on the guest's client can be used to encrypt Internet traffic.

Answer: A,C,E

NEW QUESTION: 2

Refer to the exhibit. Client 1 cannot communication with Client 2. Both clients are using

Cisco AnyConnect and have established a successful SSL VPN connection to the hub

ASA. Which command on the ASA is missing?

- A. same-security-traffic permit inter-interface
- B. dns-server value 10.1.1.3
- C. split-tunnel-network list
- D. same-security-traffic permit intera-interface

Answer: B

NEW QUESTION: 3

Your network contains an Active Directory domain named contoso.com. The domain contains two servers named Server1 and Server2.

Server1 runs Windows Server 2012. Server2 runs Windows Server 2008 R2 Service Pack 1 (SP1) and has the DHCP Server server role installed.

You need to manage DHCP on Server2 by using the DHCP console on Server1.

What should you do first?

- A. From Server Manager on Server1, install a feature.
- B. From the Microsoft Management Console on Server1, add a snap-in.
- C. From a command prompt on Server2, run winrm.exe.
- D. From Server Manager on Server2, enable Windows Remote Management.

Answer: D

Explanation:

How do you enable remote management.

Assuming the remote server is all set up and prepared to enter production, first, open

Server Manager on the remote server.

Click on the "Configure Server Manager for Remote Management" link.

Select the "Enable remote management of this server from other computers".

Click "Ok".

Note:

*You can use Server Manager to manage remote servers that are running Windows Server 2008 and Windows Server 2008 R2, but the following updates are required to fully manage these older operating systems. / Windows Management Framework 3.0 / Performance Updates

*Windows Server 2008 R2, unlike Windows Server 2008 RTM, has a nice feature that allows you to remotely manage it, from another server or from a Windows 7 workstation, by using Server Manager.

*The tasks that you can perform remotely by using Server Manager include:

View Windows automatic updating status Run Best Practices Analyzer scans on roles. View or change Windows Firewall

information View and manage roles Manage installed services
roles View Internet Explorer Advanced Security Configuration
settings (IE ESC) Configure Windows Error Reporting View or
change Windows Customer Experience Improvement Program (CEIP)
status
