Answer: B,C
Explanation:
Explanation
AWS Global Accelerator
Acceleration for latency-sensitive applications
Many applications, especially in areas such as gaming, media,
mobile apps, and financials, require very low latency for a
great user experience. To improve the user experience, Global
Accelerator directs user traffic to the application endpoint
that is nearest to the client, which reduces internet latency
and jitter. Global Accelerator routes traffic to the closest
edge location by using Anycast, and then routes it to the
closest regional endpoint over the AWS global network. Global
Accelerator quickly reacts to changes in network performance to
improve your users' application performance.
Amazon CloudFront
Amazon CloudFront is a fast content delivery network (CDN)
service that securely delivers data, videos, applications, and
APIs to customers globally with low latency, high transfer
speeds, all within a developer-friendly environment.
