Quiz 2021 Nutanix First-grade NCP-MCI-5.15: Nutanix Certified Professional - Multi cloud Infrastructure (NCP-MCI) Reliable Exam Simulations

We are still researching on adding more useful buttons on our NCP-MCI-5.15 test answers, Yes, it is not a piece of cake to pass exam, Before you buy, you can free download the demo of NCP-MCI-5.15 passleader vce to learn about our products.

Due to the variety of examinations, the NCP-MCI-5.15 study materials are also summarized for different kinds of learning materials, so that students can find the information on

NCP-MCI-5.15 guide torrent they need quickly.

Besides, we also have online chat service stuff, if you have any **Reliable NCP-MCI-5.15 Exam Simulations** questions, you can have a chat with them, or you can send emails to us, we will give you the reply as quickly as we can.

It has various self-learning and self-assessment features those help user to get acquainted with the actual Nutanix NCP-MCI-5.15 exam, First of all, the Nutanix Certified Professional - Multi cloud Infrastructure (NCP-MCI) exam engine has great self-protect function.

No matter when you need help on our NCP-MCI-5.15 training questions, the after-sale service staffs in our company share a passion for you, an intense focus on teamwork, [IIA-IAP Latest Dumps Files](#) speed and agility, and a commitment to trust and respect for all individuals.

Pass Guaranteed Quiz 2021 NCP-MCI-5.15: Updated Nutanix Certified Professional - Multi cloud Infrastructure (NCP-MCI) Reliable Exam Simulations

Doing these practice questions and answers, **Reliable NCP-MCI-5.15 Exam Simulations** you can learn to perform in the real exam as well as overcome your exam fear, All of our NCP-MCI-5.15 dumps pdf is regularly updated and you can use different products to improve your preparation level.

The quality of our NCP-MCI-5.15 study materials is high because our experts team organizes and compiles them according to the real exam's needs and has extracted the essence of all of the information about the test.

Although the passing rate of our NCP-MCI-5.15 simulating exam is nearly 100%, we can refund money in full if you are still worried that you may not pass, We are working on R & D for IT certification many years, so that most candidates can clear exam certainly with our NCP-MCI-5.15 dumps torrent.

We are well-known for our wonderful performance on pushing more and more candidates to pass their NCP-MCI-5.15 exams and achieve their dreaming certifications, So why not try our NCP-MCI-5.15 original questions, which will help you maximize your pass rate?

If you want to pass an exam just one time, then **Reliable NCP-MCI-5.15 Exam Simulations** choose, It is not hard to know that Nutanix Certified Professional - Multi cloud Infrastructure (NCP-MCI) torrent prep is compiled by hundreds of industry experts based on the syllabus and development **Reliable NCP-MCI-5.15 Exam Simulations** trends of industries that contain all the key points that may be involved in the examination.

Due to our professional services and 24/7 support, we are admired among [NCP-MCI-5.15](#) the clients, In other words, you just pay little attention to our information in our website, and then you can receive unexpected surprise.

You deserve this opportunity to win and try to make some difference in your life if you want to attend the NCP-MCI-5.15 exam and get the certification by the help of our NCP-MCI-5.15 practice braindumps.

NEW QUESTION: 1

Background

Corporate Information

Fabrikam, Inc. is a retailer that sells electronics products on the Internet. The company has a headquarters site and one satellite sales office. You have been hired as the database administrator, and the company wants you to change the architecture of the Fabrikam ecommerce site to optimize performance and reduce downtime while keeping capital expenditures to a minimum. To help with the solution, Fabrikam has decided to use cloud resources as well as on-premise servers.

Physical Locations

All of the corporate executives, product managers, and support staff are stationed at the headquarters office. Half of the sales force works at this location. There is also a satellite sales office. The other half of the sales force works at the satellite office in order to have sales people closer to clients in that area. Only sales people work at the satellite location.

Problem Statement

To be successful, Fabrikam needs a website that is fast and has a high degree of system uptime. The current system operates on a single server and the company is not happy with the single point of failure this presents. The current nightly backups have been failing due to insufficient space on the available drives and manual drive cleanup often needing to happen to get past the errors. Additional space will not be made available for backups on the HQ or satellite servers. During your investigation, you discover that the sales force reports are causing significant contention.

Configuration

Windows Logins

The network administrators have set up Windows groups to make it easier to manage security. Users may belong to more than one group depending on their role. The groups have been set up as shown in the following table:

Server Configuration The IT department has configured two physical servers with Microsoft Windows Server 2012 R2 and SQL Server 2014 Enterprise Edition and one Windows Azure Server. There are two tiers of storage available for use by database files only a fast tier and a slower tier. Currently the data

and log files are stored on the fast tier of storage only. If a possible use case exists, management would like to utilize the slower tier storage for data files. The servers are configured as shown in the following table:

Database

Currently all information is stored in a single database called ProdDB, created with the following script:

The Product table is in the Production schema owned by the ProductionStaff Windows group. It is the main table in the system so access to information in the Product table should be as fast as possible. The columns in the Product table are defined as shown in the following table:

The SalesOrderDetail table holds the details about each sale. It is in the Sales schema owned by the SalesStaff Windows group. This table is constantly being updated, inserted into, and read. The columns in the SalesOrderDetail table are defined as shown in the following table:

Database Issues

The current database does not perform well. Additionally, a recent disk problem caused the system to go down, resulting in lost sales revenue. In reviewing the current system, you found that there are no automated maintenance procedures. The database is severely fragmented, and everyone has read and write access.

Requirements

Database

The database should be configured to maximize uptime and to ensure that very little data is lost in the event of a server failure. To help with performance, the database needs to be modified so that it can support in-memory data, specifically for the Product table, which the CIO has indicated should be a memoryoptimized table. The auto-update statistics option is set off on this database. Only product managers are allowed to add products or to make changes to the name, description, price, cost, and supplier. The changes are made in an internal database and pushed to the Product table in ProdDB during system maintenance time. Product managers and others working at the headquarters location also should be able to generate reports that include supplier and cost information.

Customer data access

Customers access the company's website to order products, so they must be able to read product information such as name, description, and price from the Product table. When customers place orders, stored procedures called by the website update product quantity on-hand values. This means the product table is constantly updated at random times.

Customer support data access

Customer support representatives need to be able to view and not update or change product information.

Management does not want the customer support representatives to be able to see the product cost or any supplier information. Sales force data access

Sales people at both the headquarters office and the satellite office must generate reports that read from the Product and SalesOrderDetail tables. No updates or inserts are ever made by sales people. These reports are run at random times and there can be no reporting downtime to refresh the data set except during the monthly maintenance window. The reports that run from the satellite office are process intensive queries with large data sets. Regardless of which office runs a sales force report, the SalesOrderDetail table should only return valid, committed order data; any orders not yet committed should be ignored.

Historical Data

The system should keep historical information about customers who access the site so that sales people can see how frequently customers log in and how long they stay on the site.

The information should be stored in a table called Customer Access. Supporting this requirement should have minimal impact on production website performance.

Backups

The recovery strategy for Fabrikam needs to include the ability to do point in time restores and minimize the risk of data loss by performing transaction log backups every 15 minutes.

Database Maintenance

The company has defined a maintenance window every month when the server can be unavailable. Any maintenance functions that require exclusive access should be accomplished during that window.

Project milestones completed

Revoked all existing read and write access to the database, leaving the schema ownership in place.

Configured an Azure storage container secured with the storage account name MyStorageAccount with

the primary access key StorageAccountKey on the cloud file server.

SQL Server 2014 has been configured on the satellite server and is ready for use.

On each database server, the fast storage has been assigned to drive letter F:, and the slow storage

has been assigned to drive letter D:.

You need to implement a backup strategy to support the requirements.

Which two actions should you perform? Each correct answer presents part of the solution. (Choose two.)

A. Schedule a full backup by using the command `BACKUP DATABASE ProdDB TO SHARE ... WITH CREDENTIAL=N' MyCredential'`

B. Create a credential called MyCredential on SQL Server, using

MyStorageAccount for the storage account name and StorageAccountKey for the access key.

C. Create a share on the hot standby site and grant permission to the SQL Server service login.

D. Schedule a full backup by using the command `BACKUP DATABASE ProdDB TO DISK...`

E. Schedule a full backup by using the command `BACKUP DATABASE ProdDB TO URL ... WTTTH CREDENTIAL=N'MyCredential'`

F. Create a share on your Windows Azure site by using your Windows Azure storage account information, and grant permission to the SQL Server service login.

G. Create a credential called MyCredential on SQL Server by using a Windows domain account and password.

Answer: E,F

Explanation:

Explanation/Reference:

Explanation:

- Scenario: The current nightly backups have been failing due to insufficient space on the available drives and manual drive cleanup often needing to happen to get past the errors. Additional space will not be made available for backups on the HQ or satellite servers.

- Need to store files in the cloud.

- Manage your backups to Windows Azure: Using the same methods used to backup to DISK and TAPE, you can now back up to Windows Azure storage by Specifying URL as the backup destination.

You can use this feature to manually backup or configure your own backup strategy like you would for a local storage or other off-site options.

This feature is also referred to as SQL Server Backup to URL.

SQL Server Managed Backup to Windows Azure

NEW QUESTION: 2

A new host has been added to the SAN and new LUNS have been created for the host's use. The administrator has created an alias for the host WWPN and placed that alias in to a zone. Which of the following must the administrator do NEXT to enable connectivity between the host and storage array?

A. Add a zone for the array and enable the configuration

B. Add the target to the zone and enable the configuration.

C. Add the initiator to the zone and enable the configuration.

D. Add another alias to the zone and enable the configuration

Answer: B

NEW QUESTION: 3

Which three options are valid 'Units of measure' in a Resource Type's['Load Threshold' section, that are used to determine how the icons are displayed in the Dispatch Console based on the resource's current load?

- A. Travel time cost
- B. Time percent
- C. Working hours cost
- D. Number of activities
- E. Overtime cost
- F. Hours

Answer: A,D,F
