Case Study

Trey Research is a global marketing research organization that has a main office in Moscow and branch offices in Los Angeles, London, Berlin, Copenhagen, and Jakarta.

The number of users per office is shown below:

Existing systems and telephones

The company has existing IP-PBX systems that are reaching end of life. They use an automatic call distribution (ACD) system

for their help desk. This system provides interactive voice response options to users so that they can choose the location for support. This system is also reaching end of life. The Copenhagen office uses a call group pickup solution that runs on an existing IP-PBX system. All users with the exception of users in Copenhagen have Direct Inward Dialing (DID) numbers.

Trey Research has Skype for Business Enterprise pools in the Moscow, London, and Berlin offices, respectively. They run a Unified Communications Managed API (UCMA) based application in a trusted application pool.

All users in Trey Research are using Aries phones. Users authenticate by using PIN codes.

Quarterly global town hall meetings

Executive conduct global town hall meetings each quarter. Each meeting occurs in a different office.

Employees attend the global town hall meetings in meeting rooms which are equipped with full high definition (HD) screens for video. Ten percent of the employees attend the audio portion of the global town hall meetings from their desk.

Trey Research plans to implement Skype for Business Enterprise Voice across the company to replace the existing IP-PBX systems.

You must use the following typical bandwidth values to determine the bandwidth requirements in kilobits per second (Kbps) for the solution:

Video resolution bandwidth:

Audio codec bandwidth:

You have the following requirements:

General

You must reduce international long distance calling costs, and lower support and administration costs

for the IP-PBX and ACD solutions.

You must implement voice survivability for all the sites in case of a wide area network (WAN) link

failure.

Where possible, you must optimize media paths.

The solution must be resilient to the failure of mediation server pools.

The maximum concurrent peer-to-peer connections between Moscow and Berlin will be 196.

Response groups must be managed by dedicated response group administrators.

Gateways

Existing gateways do not support the REFER method. You must use the existing gateways with Skype

for Business to provide PSTN connectivity.

In the event of a failure of both gateways at any office, all international calls from that office must route

through the Moscow gateways.

Outbound calls

All calls placed to Russia from any office must route through the Moscow gateways.

Germany experiences high public switched telephone network (PSTN) call volume. All calls for

Germany must breakout from Berlin in the event of Mediation Server pool failure in Berlin.

All PSTN calls to Germany must use Berlin gateways in the event of Mediation Server pool failure in

Berlin.

You need to replace the existing call group pickup solution in Denmark with a Skype for Business solution.

You need to prepare the Skype for Business Server 2015 environment to provide call group pickup functionality.

Which three Skype for Business Management Shell cmdlets should you run in sequence? To answer, move the appropriate Skype for Business Management Shell cmdlets from the list of cmdlets to the answer area and arrange them in the correct order.

Select and Place:

**Answer:**

Explanation:

Explanation/Reference:

"You need to prepare the Skype for Business Server 2015 environment to provide call group pickup functionality."

We're just preparing the environment. We're not creating the call park yet. After running the three cmdlets above, you can then run the NewCsCallParkOrbit cmdlet.
