Responsible company, If you have any question about our C_THR96_2105 learning engine, our service will give you the most professional suggestion and help, We know that your work is very busy, and there are many trivial things in life.

NEW QUESTION: 1

- A. Option A
- B. Option D
- C. Option B
- D. Option C

Answer: A

Explanation:

Public key cryptography, or asymmetric cryptography, is any cryptographic system that uses pairs of keys: public keys which may be disseminated widely, and private keys which are known only to the owner.

This accomplishes two functions: authentication, which is when the public key is used to verify that a holder of the paired private key sent the message, and encryption, whereby only the holder of the paired private key can decrypt the message encrypted with the public key.

NEW QUESTION: 2

DRAG DROP

Your network contains a System Center 2012 R2 Configuration Manager Service Pack 1 (SP1) environment.

You create a collection named All Managed Servers.

You need to inventory the environment variables of the All Managed Servers collection.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Answer:

Explanation:

Explanation/Reference:

* Win32_Environment class (Windows)

The Win32_Environment WMI class represents an environment or system environment setting on a Windows computer system.

Querying this class returns environment variables found in:

HKEY_LOCAL_MACHINE\System\CurrentControlSet\Control\Sessionmanager\Environment And HKEY_USERS\<user>\Environment Since

we need to inventory WMI information, that means we need Hardware Inventory and you can only do that with a Custom Client Device Setting:

NEW QUESTION: 3

Your development team is building a new web solution by using the Microsoft Visual Studio integrated development environment (IDE).

You need to make a custom package available to all the developers. The package must be managed centrally, and the latest version must be available for consumption in Visual Studio automatically.

Which three actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

A. Add the package URL to the Environment settings in Visual Studio.

B. Create a Git repository in Azure Repos.

C. Upload a package to a Git repository.

D. Create a new feed in Azure Artifacts.

E. Publish the package to a feed.

F. Add the package URL to the NuGet Package Manager settings in Visual Studio.

Answer: D,E,F

Explanation:

B: By using your custom NuGet package feed within your Azure DevOps (previously VSTS) instance, you'll be able to distribute

your packages within your organization with ease.

Start by creating a new feed.

A: We can publish, pack and push the built project to our NuGet feed.

E: Consume your private NuGet Feed

Go back to the Packages area in Azure DevOps, select your feed and hit "Connect to feed". You'll see some instructions for your feed, but it's fairly simple to set up.

Just copy your package source URL, go to Visual Studio, open the NuGet Package Manager, go to its settings and add a new source. Choose a fancy name, insert the source URL. Done. Search for your package in the NuGet Package Manager and it should appear there, ready for installation.

Make sure to select the appropriate feed (or just all feeds) from the top right select box.
