The SAN team has configured storage for the cluster and sent the configuration to you in the email shown in the SAN Team Email exhibit. (Click the Exhibit button.)

tempdb on local storage. FCIs now support placement of tempdb on local non-shared storage, such as a local solid-state-drive, potentially offloading a significant amount of I/O from a

shared SAN.
Prior to SQL Server 2012, FCIs required tempdb to be located on
a symmetrical shared storage volume that failed over with other
system databases.
Box 2: No
The VNN is set on the group level, not on the instance level.
Database client applications can connect directly to a SQL
Server instance network name, or they may connect to a virtual
network name (VNN) that is bound to an availability group
listener. The VNN abstracts the WSFC cluster and availability
group topology, logically redirecting connection requests to
the appropriate SQL Server instance and database replica.
The logical topology of a representative AlwaysOn solution is
illustrated in this diagram:
