**Answer:**

Explanation:

Explanation

Box 1: No

Administrator accounts are special accounts with elevated permissions. To secure them, the following restrictions apply to changing passwords of administrators:  
On-premises enterprise administrators or domain administrators cannot reset their password through Self-service password reset (SSPR). They can only change their password in their on-premises environment.

Thus, we recommend not syncing on-prem AD admin accounts to Azure AD.

An administrator cannot use secret Questions & Answers as a method to reset password.

Box 2: Yes

Self-service password reset (SSPR) is an Azure Active Directory feature that enables employees to reset their passwords without needing to contact IT staff.

Box 3: Yes

**NEW QUESTION: 2**

Which of the following factors related to scheduling would most directly affect the performance of an audit?

- A. The auditee's annual business plan
- B. The scope of the audit
- C. The client's company policy
- D. The evaluation of corrective action

**Answer: B**

### **NEW QUESTION: 3**

Steps to Create and set up the Content Search Service Application

- A. Go to Central Administration, in the System Settings click on Manage services on server. On Services on Server page, in the Server box, select the Search Service server. Find the row whose Services column value is Search Service. In the value in the Status column is Stopped, click Start in the Action column.
- B. Go to Application Management and click Manage Services Applications. Then click on New, Search Service. Create New Search Service Application and enter the Name. In the FAST Service Application select FAST Search Connector and set the Search Account.
- C. From Windows PowerShell, run the start-spSearch cmdlet.
- D. Go to Central Administrator, click on System Settings. In Farm Management section, click Manage Farm Search, Click Enable Search. Click Ok to finish.

**Answer: B**

Explanation:

Resources:

<http://technet.microsoft.com/en-us/library/ff381261.aspx> To be able to crawl content with the indexing connectors integrated in Microsoft SharePoint Server 2010, you must prepare the FAST Search Content Search Service Application (Content SSA). The Content SSA will crawl content and feed it into the FAST Search Server 2010 for SharePoint back-end. After you have created the Content SSA and before you add a content source and configure crawling with the Content SSA, you must enable SSL communication between FAST Search Server 2010 for SharePoint and Microsoft SharePoint Server 2010. This is mandatory; you will not be able to feed content to FAST Search Server 2010 for SharePoint without enabling SSL communication.
