Answer: D

NEW QUESTION: 4
Refer to the exhibit.

R1 accesses the Internet using E0/0. You have been asked to
configure R1 so that a default route is generated to its
downstream neighbors (191.0.0.1 and 192.0.0.1). Which commands
would create this configuration?
A. router eigrp 190
redistribute static
!
ip route 0.0.0.0 255.255.255.255 Null0
B. router eigrp 190
redistribute static
!
ip route 0.0.0.0 0.0.0.0 Null0
C. ip default-network 20.0.0.0
D. ip default-network 20.20.20.0
Answer: B
Explanation:
Explanation/Reference:
Explanation:
Since you are running EIGRP and you have other routers that

need a default route, you can use EIGRP to distribute that
without having to program static routes in each. Since 2 are
default routes they are only used on the router that they are
configured on. The first option has you configure the static
route as well as a way to redistribute that route to other
routers connecting to you via EIGRP. This will essentially
publish this route the same as if it were programmed in with
the network x.x.x.x sub-command in the router eigrp
100 routing table.
