- B. 4
- C. 48
- D. 48
- E. 4

Answer: C

Explanation:

The company has a network with 48 servers. The network is segmented into four VLANs. Each VLAN has a different IP address range. The company wants to deploy a new operating system image to all servers. The image is 4GB in size. The company has a 100Mbps network. The company wants to minimize the time to deploy the image. The company has a 100Mbps network. The company wants to minimize the time to deploy the image.

NEW QUESTION: 4

Scenario: A company has a network with 48 servers. The network is segmented into four VLANs. Each VLAN has a different IP address range. The company wants to deploy a new operating system image to all servers. The image is 4GB in size. The company has a 100Mbps network. The company wants to minimize the time to deploy the image. The company has a 100Mbps network. The company wants to minimize the time to deploy the image.

The company has a network with 48 servers. The network is segmented into four VLANs. Each VLAN has a different IP address range. The company wants to deploy a new operating system image to all servers. The image is 4GB in size. The company has a 100Mbps network. The company wants to minimize the time to deploy the image. The company has a 100Mbps network. The company wants to minimize the time to deploy the image.

Answer:

Explanation:

Explanation

Box 1: a computer joined in the Active Directory domain
The Active Directory domain service stores passwords in the form of a hash value representation, of the actual user

password.

Box 2: Stored in both Azure AD and in the Active Director domain

The Active Directory domain service stores passwords in the form of a hash value representation, of the actual user password.

To synchronize your password, Azure AD Connect sync extracts your password hash from the on-premises Active Directory instance.
