Answer: C
Explanation:
SmartClone technology is based on the space-efficient LeftHand
Thin Provisioning architecture, andthe volume clones can be
used without limitation along with all other LeftHand OS
features like Network RAID,Thin Provisioning, Snapshot, and
Remote Copy. The feature works by taking any volume or snapshot
andmaking one or many clones in an instant. The cloning
function makes a permanent, read/write volume on thearray,
pointing back to the original volume's blocks instead of
duplicating the blocks. By managing each cloneas a pervasive
volume, SmartClone eliminates any requirement for a volume,
snapshot, or any of itspredecessors to exist after the clone
has been created, and also eliminates the need to run
de-duplicationsoftware, because there are no duplicate blocks.
The clone shares the original volume's blocks and uses
copyon-write semantics. SmartClone technology reduces storage
costs and increases overall storage efficiency.
Administrators can store "gold-master" system images on the
array for virtual desktop and boot-from-SANimplementations, and
quickly provision test environments using real production data.
To simplify management,administrators can view all of the
relationships between clones, volumes, and snapshots
graphically in theControl Management Console.
