NEW QUESTION: 1

CORRECT TEXT

Route.com is a small IT corporation that is attempting to implement the network shown in the exhibit. Currently the implementation is partially completed. OSPF has been configured on routers Chicago and NewYork. The S0/0 interface on Chicago and the S0/1 interface on NewYork are in Area 0. The loopback0 interface on NewYork is in Area 1. However, they cannot ping from the serial interface of the Seattle router to the loopback interface of the NewYork router. You have been asked to complete the implementation to allow this ping.

ROUTE.com's corporate implementation guidelines require:

- * The OSPF process ID for all routers must be 10.

- * The routing protocol for each interface must be enabled under the routing process.

- * The routing protocol must be enabled for each interface using the most specific wildcard mask possible.

- * The serial link between Seattle and Chicago must be in OSPF area 21.

- * OSPF area 21 must not receive any inter-area or external routes.

Network Information

Seattle

S0/0 192.168.16.5/30 - Link between Seattle and Chicago

Secret Password: cisco

Chicago

S0/0 192.168.54.9/30 - Link between Chicago and NewYork

S0/1 192.168.16.6/30 - Link between Seattle and Chicago

Secret Password: cisco

NewYork

S0/1 192.168.54.10/30 - Link between Chicago and NewYork

Loopback0 172.16.189.189

Secret Password: cisco

Answer:

Explanation:

Here is the solution below:

Explanation:

Note: In actual exam, the IP addressing, OSPF areas and process ID, and router hostnames may change, but the overall solution is the same.

Seattle's S0/0 IP Address is 192.168.16.5/30. So, we need to find the network address and wildcard mask of 192.168.16.5/30 in order to configure the OSPF.

IP Address: 192.168.16.5 /30

Subnet Mask: 255.255.255.252

Here subtract 252 from 2565, $256 - 252 = 4$, hence the subnets will increment by 4.

First, find the 4th octet of the Network Address:

The 4th octet of IP address (192.168.16.5) belongs to subnet 1 (4 to 7).

Network Address: 192.168.16.4

Broadcast Address: 192.168.16.7

Lets find the wildcard mask of /30.

Subnet Mask: (Network Bits - 1's, Host Bits - 0's)

Lets find the wildcard mask of /30:

Now we configure OSPF using process ID 10 (note the process ID may change to something else in real exam).

Seattle>enable

```
Password:
Seattle#conf t
Seattle(config)#router ospf 10
Seattle(config-router)#network 192.168.16.4 0.0.0.3 area 21
One of the tasks states that area 21 should not receive any
external or inter-area routes (except the default route).
Seattle(config-router)#area 21 stub
Seattle(config-router)#end
Seattle#copy run start
Chicago Configuration:
Chicago>enable
Password: cisco
Chicago#conf t
Chicago(config)#router ospf 10
We need to add Chicago's S0/1 interface to Area 21
Chicago(config-router)#network 192.168.16.4 0.0.0.3 area 21
Again, area 21 should not receive any external or inter-area
routes (except the default route).
In order to accomplish this, we must stop LSA Type 5 if we
don't want to send external routes. And if we don't want to
send inter-area routes, we have to stop LSA Type 3 and Type 4.
Therefore we want to configure area 21 as a totally stubby
area.
Chicago(config-router)#area 21 stub no-summary
Chicago(config-router)#end
Chicago#copy run start
The other interface on the Chicago router is already configured
correctly in this scenario, as well as the New York router so
there is nothing that needs to be done on that router.
```

NEW QUESTION: 2

A third party application has the ability to maintain its own user accounts or it may use single sign-on. To use single sign-on, the application is requesting the following information: OU=Users, DC=Domain, DC=COM. This application is requesting which of the following authentication services?

- A. Kerberos
- B. RADIUS
- C. TACACS+
- D. LDAP

Answer: D

NEW QUESTION: 3

You have connected a switch to another switch in your fabric. What is the first event that will take place that tells the fabric the new device has been connected?

- A. an EFP sequence
- B. an ESS sequence
- C. an ELP sequence

D. an HLO sequence

Answer: C
