We provide you best service too, Make sure that [New EX342 Test Objectives](#) you are going through our 220-901 pdf questions so you can easily prepare for the exam.

NEW QUESTION: 1

A. Option C
B. Option D
C. Option B
D. Option A
Answer: C
Explanation:
Scenario:

A stored procedure named USP_3 is used to update prices. USP_3 is composed of several UPDATE statements called in sequence from within a transaction.
Currently, if one of the UPDATE statements fails, the stored procedure continues to execute.
- When SET XACT_ABORT is ON, if a Transact-SQL statement raises a run-time error, the entire transaction is terminated and rolled back.

NEW QUESTION: 2
HOTSPOT
Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.
You query a database that includes two tables: Project and Task. The Project table includes the following columns:

You need to identify the owner of each task by using the following rules:
- Return each task's owner if the task has an owner.
- If a task has no owner, but is associated with a project that has an owner, return the project's owner.
- Return the value -1 for all other cases.
How should you complete the Transact-SQL statement? To answer, select the appropriate Transact-SQL segments in the answer area.

Answer:
Explanation:

Explanation:
Box 1: COALESCE
COALESCE evaluates the arguments in order and returns the current value of the first expression that initially does not evaluate to NULL.
Box 2: T.UserID, p.UserID, -1
- Return each task's owner if the task has an owner.
- If a task has no owner, but is associated with a project that has an owner, return the project's owner.
- Return the value -1 for all other cases.
Box 3: LEFT JOIN
The LEFT JOIN keyword returns all rows from the right table (table2), with the matching rows in the left table (table1).
The result is NULL in the left side when there is no match.
Here the right side could be NULL as the projectID of the task could be NULL.

NEW QUESTION: 3
Contoso, Ltd, has an Office 365 tenant. You configure Office 365 to use the domain contoso.com, and you verify the domain. You deploy and configure Active Directory Federation Services (AD FS) and Azure Active Directory Connect with password synchronization. You connect to Azure Active Directory by using a Remote Windows PowerShell session.
You need to switch from using AD FS to using password-synced passwords on the Office 365 verified domain.
Which Windows PowerShell command should you run?
A. Convert-MsolFederatedUser
B. Convert-MsolDomainToStandard -DomainName contoso.com
C. Set-MsolDomainAuthentication -DomainName contoso.com
D. Convert-MsolDomainToFederated -DomainName contoso.com
Answer: B
Explanation:
Explanation
To switch large sets of users from federated authentication to managed authentication with password sync you can use the Entire namespace conversion approach. To convert the desired namespace from Federated to Managed, you have to use the Convert-MsolDomainToStandard cmdlet.
