Explanation

This reference architecture shows how to deploy VMs and a virtual network configured for an N-tier application, using SQL Server on Windows for the data tier.

Scenario: You have a public-facing application named App1. App1 is comprised of the following three tiers:

- * A SQL database
- * A web front end
- * A processing middle tier

Each tier is comprised of five virtual machines. Users access the web front end by using HTTPS only.

- * Technical requirements include:
- * Move all the virtual machines for App1 to Azure.
- * Minimize the number of open ports between the App1 tiers.

Cisco

SD-Access is a network architecture that uses a logical topology to connect devices that are built over an arbitrary physical underlay topology. An overlay network is created on top of the underlay network through virtualization (virtual networks). The data plane traffic and control plane signaling are contained within each virtualized network, maintaining isolation among the networks and an independence from the underlay network. SD-Access allows for the extension of Layer 2 and Layer 3 connectivity across the overlay through the services provided by through LISP.

NEW QUESTION: 4

What does "residual risk" mean?

- A. The security risk that remains after controls have been implemented
- B. A security risk intrinsic to an asset being audited, where no mitigation has taken place.
- C. Weakness of an assets which can be exploited by a threat
- D. Risk that remains after risk assessment has has been

performed

Answer: A

Explanation:

Residual risk is "The security risk that remains after controls have been implemented" ISO/IEC TR 13335-1 Guidelines for the Management of IT Security (GMITS), Part 1: Concepts and Models for IT Security, 1996. "Weakness of an assets which can be exploited by a threat" is vulnerability. "The result of unwanted incident" is impact. Risk that remains after risk analysis has been performed is a distracter. Risk can never be eliminated nor avoided, but it can be mitigated, transferred or accepted. Even after applying a countermeasure like for example putting up an Antivirus. But still it is not 100% that systems will be protected by antivirus.
